

A man with a beard and extensive tattoos on his arms is shown in profile, working on a wall made of large, vertical wooden planks. He is using a hammer with a bright orange handle and a black head. The scene is lit with warm, golden light, suggesting an outdoor or well-lit indoor setting. The overall aesthetic is rugged and professional.

NEW

BlackGiant® Big Flat Bar
380 mm

BlackGiant® Bars and BlackGiant® Pro Bars are the nail pullers from PICARD for particularly tough use. The ingenious design extends the range of applications to places where conventionally shaped nail bars have to give up: in narrow crevices, close to vertical surfaces and where high leverage forces require maximum demands on the quality of the material. The range includes nail bars in numerous sizes and shapes – from the 1210 mm long BlackGiant® Bar to the handy, no less robust Flat-Bar and Utility-Bar.

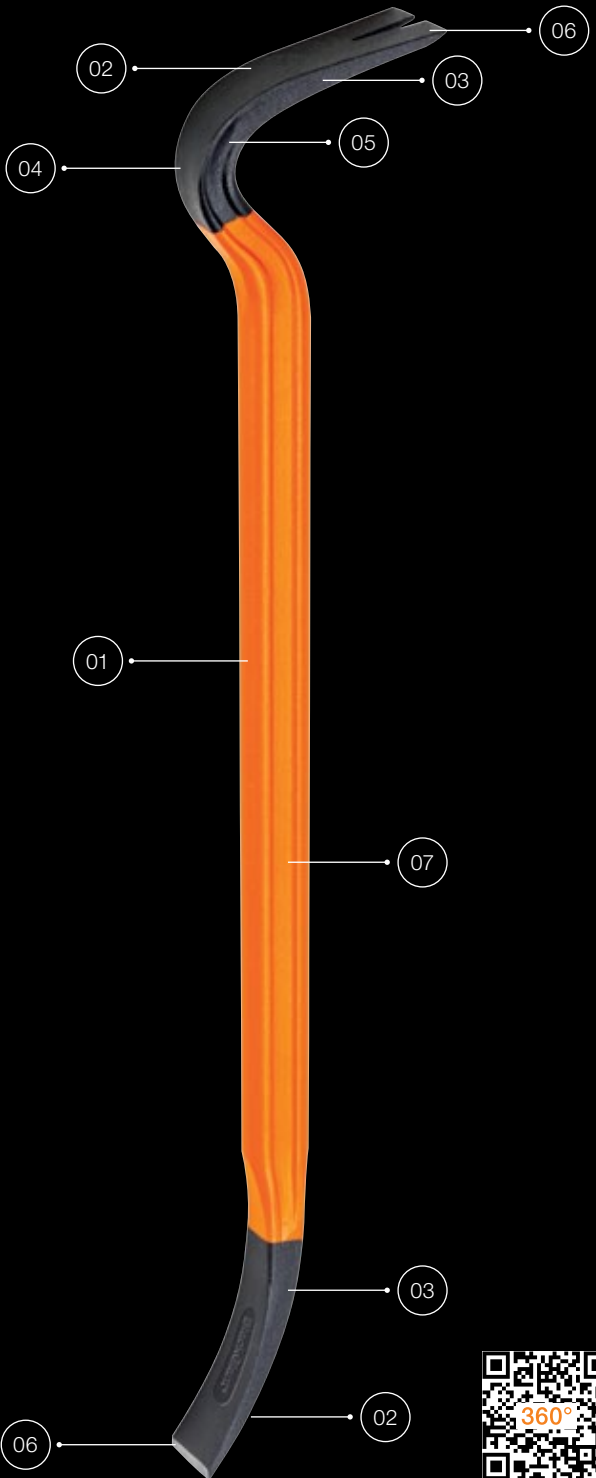

BlackGiant® Bar
300, 610, 930, 1210 mm

BlackGiant® Flat-Bar
175 mm

BlackGiant® Utility-Bar
250 mm

BLACKGIANT® BAR

The BlackGiant® Bar, which is forged and hardened from a single piece offers impressively high-quality steel. It makes the tool long-lasting and robust. But it wouldn't be a PICARD tool if the details didn't match too. That is how we are redefining the standard for what a nail puller can do. It is available singly in four lengths – 300, 610, 930 and 1210 mm – or as a set.

01_Monoblock tool

The BlackGiant® Bar is forged from one piece of alloyed steel, hardened and tempered for maximum durability.

02_Support surfaces

The extra wide forged support surfaces reduce the risk of unwanted damage to the underground.

03_Rough-and-Tough finish

The rugged Rough-and-Tough finish creates a rough surface for improved grip of the BlackGiant® Bar. This is where smooth sanded conventional pullers fall down.

04_Progressive curve

The progressive curving of the round end increases leverage by more than 55%. This ensures better transmission of forces.

05_90° Design

The round end is shaped in such a way that the BlackGiant® Bar is particularly useful to use on vertical surfaces. This 90° design ensures that the ideal length of travel is available to lever.

06_Ground blades

Precisely ground blades facilitate entry into narrow cracks.

07_Stable profile

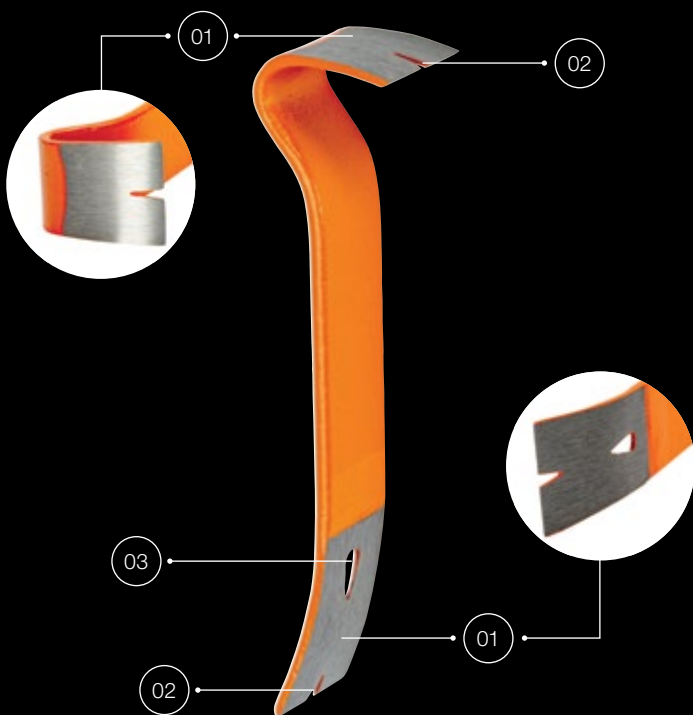

The profile is shaped like a double T with a round end. This is not only easier to grip, but also more resistant to bending and lighter than traditional round or hexagonal profiles.

BLACKGIANT® FLAT-BAR

Small but perfectly formed: the BlackGiant® Flat-Bar is always to hand, without carrying much weight. It is as sturdy as it is light. With its wide surfaces and flat profile, it is an ideal tool for upholsterers, decorators, and also for roofing and joinery.

Art. no. 0004699-001

01_Support surfaces

The bright finished surfaces allow precise working in all areas.

02_Nail holder

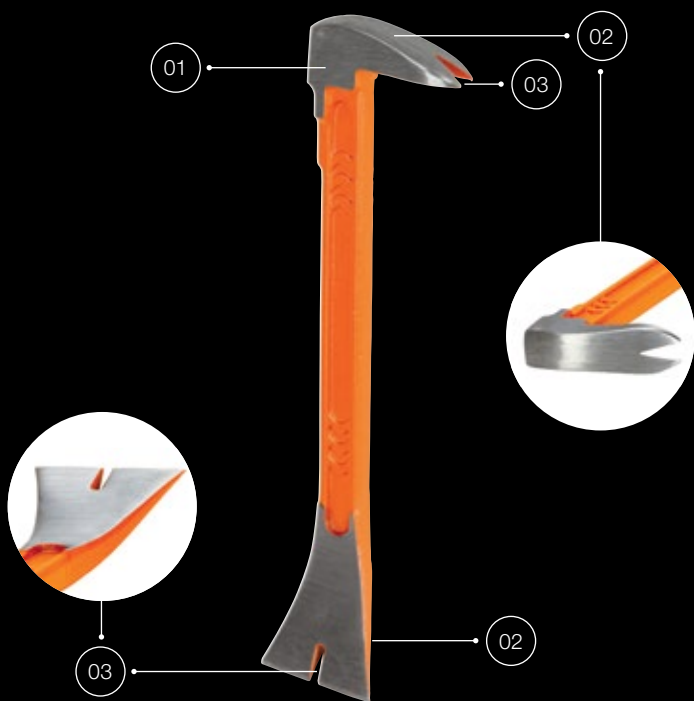

To lift small and deep-set nails – where other nail pullers cannot succeed.

03_Pierced nail puller

For effortless removal of firmly anchored nails.

BLACKGIANT® UTILITY-BAR

The BlackGiant® Utility-Bar is a handy, yet durable nail puller with ingenious details. These include the straight striking surface and the claw designed for maximum leverage. Small enough to fit in a tool belt, yet rugged enough for daily use. **Art. No. 0004699-002**

01_Solid lever head

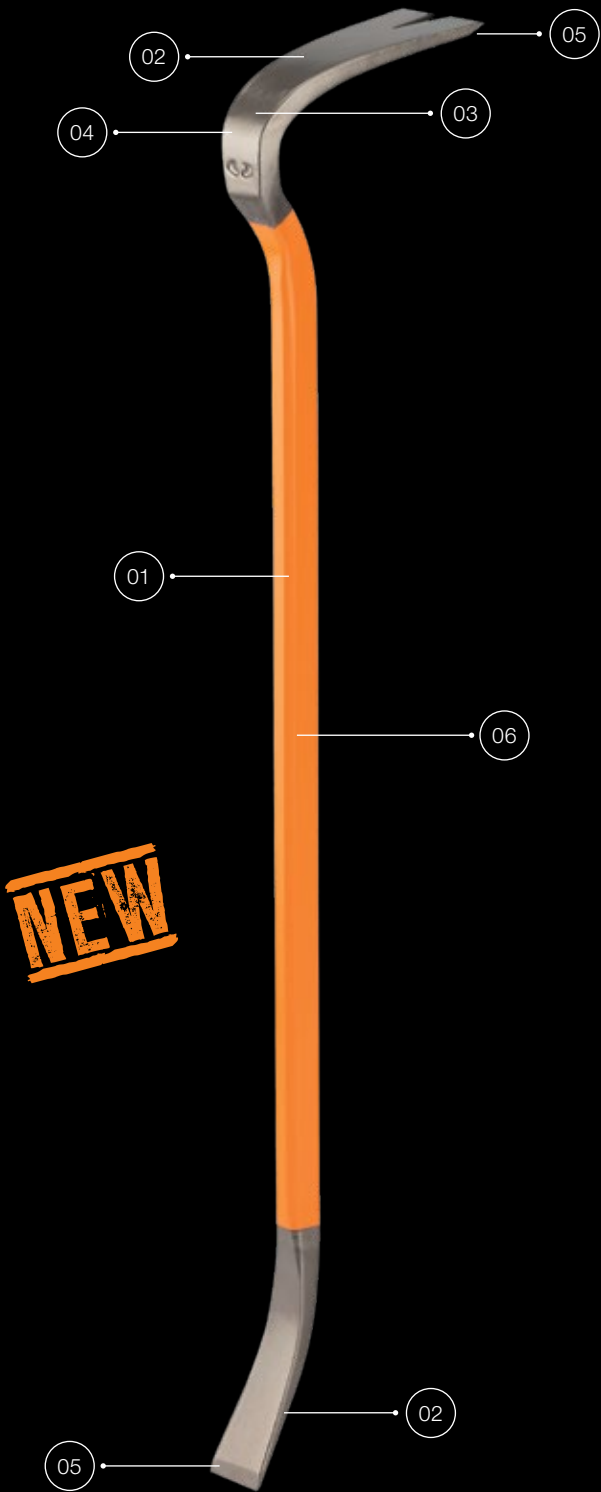

Solid head transverse to the tool axis for rugged use with flattened small striking surface.

02_Support surfaces

The bright finished surfaces of the nail puller allow precise working in all areas.

03_Nail holder and nail puller

Lifts and pulls small and deep-set nails – where other nail pullers cannot succeed.

NEW

BLACKGIANT® PRO BAR

In addition to the proven details of the BlackGiant® bars, the BlackGiant® Pro bars have everything you need when the going gets tough: they are more stable and 40 percent lighter. The ground blade penetrates even narrow crevices – and if you need to, you can help out with a hammer. For this purpose, we have shaped the back of the claw as a striking surface. The Pro Bars are available in lengths of 375, 500, 600, 750 and 900 mm.

01_Monoblock tool

Twice the bending/tearing strength compared to our standard Standard BlackGiant® Bars.

02_Support surfaces

The extra wide forged support surfaces reduce the risk of unwanted damage to the underground.

03_Progressive curve

The progressive curving of the round end increases leverage by more than 55%. This ensures better transmission of forces.

04_90°-Design and striking surface

The round end is shaped in such a way that the BlackGiant® Bar is particularly useful to use on vertical surfaces. This 90° design ensures that the ideal length of travel is available to lever. The flattened striking surface enables a secure and easy drive-in.

05_Ground blades

Precisely ground blades facilitate entry into narrow cracks.

06_Oval profile

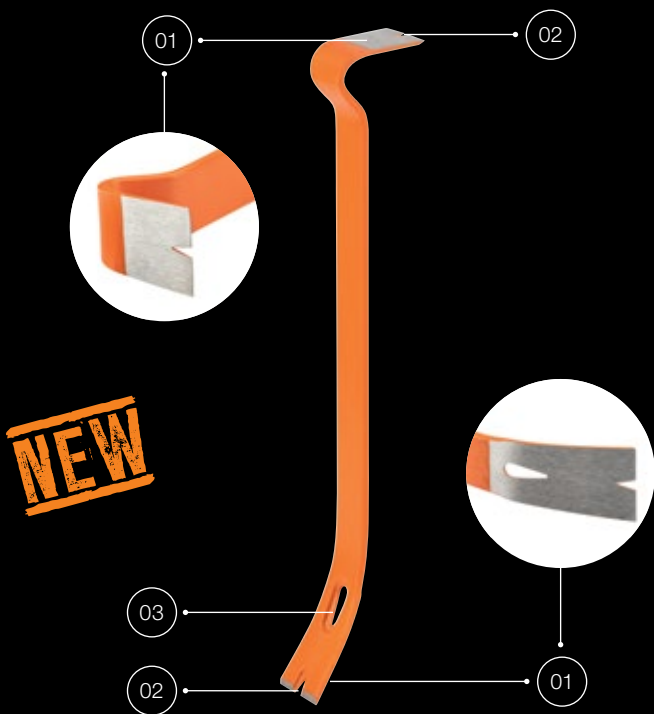

Oval profile for extra strength compared to octagonal bodies/profiles. 40% lighter than standard BlackGiant® bars and comparable nail bars.

BLACKGIANT® BIG FLAT-BAR

The Big Flat-Bar is an extremely flat nail bar. Even narrow areas of operation and very small, low-set nails are no problem. However, it can also be used to remove mouldings or even to open cans. The compact size and low weight make it very easy to store and transport. The robust and durable nail bar also impresses with its extra-flat shaft. Both ends are equipped with a curved claw.
